Investment plan of over €1bn in RES in Romania

HELLENiQ ENERGY Holdings S.A., as part of its strategy to develop a diversified energy portfolio in Southeastern Europe, announces that it plans to invest more than €1bn in Romania by 2030, with the aim of further expanding its activities in Renewable Energy Sources (RES) and energy storage. The investment plan supports the Group's medium-term target of achieving more than 2 GW of installed RES capacity by 2030.

Through HELLENiQ Renewables, the Group has 211 MW of photovoltaic projects in operation in Romania, as well as a 96 MW wind park under construction, whose completion is scheduled for 2Q27. The total portfolio under development in Romania exceeds 800 MW of RES projects and 500 MW of battery energy storage systems.

These investments will contribute to Romania's energy security, support the integration of more renewable energy into the electricity system, and enhance the flexibility and resilience of the grid.
